WindowBuilder pour Eclipse

Installation de l'outil
WindowBuilder sur Eclipse

XH

10

Plugin WindowBuilder

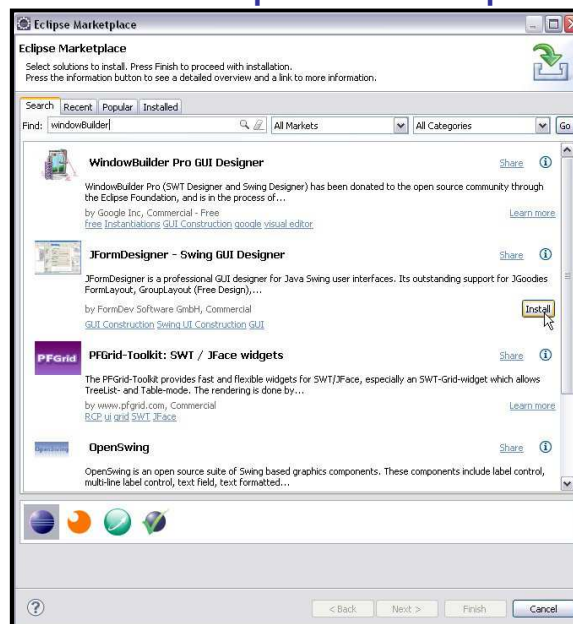

- Eclipse WindowBuilder is composed of Eclipse SWT Designer and Eclipse Swing Designer and makes it very easy to create Java GUI applications without spending a lot of time writing code
- Use the WYSIWYG visual designer and layout tools to create simple forms to complex windows; the Java code will be generated for you
- Easily add controls using drag-and-drop, add event handlers to your controls, change various properties of controls using a property editor, internationalize your app and much more

Avec WindowBuilder (1), les composants

The screenshot displays the Eclipse IDE interface. The Package Explorer on the left shows a project structure with 'FenetrePrincipaleComposant.java' selected. The Structure view in the center shows the component hierarchy. The Properties view at the bottom shows the properties of the selected component. A preview window on the right shows the visual representation of the component, which is a login form with fields for 'Entrez le login', 'Entrez le mot de passe', and 'affichage du login', along with buttons for 'Annuler' and 'Valider'.
